List of Plates

- Plate 1A. The Lasithi Plain as seen from the acropolis of Plati, looking north. Arrow points to the cave of Hagios Charalambos, with the modern village to the left.
- Plate 1B. Conservators Alekos Nikakis and Nearchos Nikakis close the cave with a locked iron gate covered by stones and a concrete wall.
- Plate 2A. The Lasithi Plain as seen from Plati. Hagios Charalambos is at the left.
- Plate 2B. The northwest side of the Lasithi Plain with the swallow-hole called the Chonos in the distance (below arrow). Geologist Panayiotis Karkanias (left) and conservator Alekos Nikakis (right) discuss the geology of the Chonos.
- Plate 3A. Vertical cliffs adjacent to the Chonos with Panayiotis Karkanias (left) and Alekos Nikakis (right).
- Plate 3B. The cave (the Chonos) drains the Lasithi Plain, and the walls channel the stream, named Megalos Potamos, toward the natural drain.
- Plate 4A. Contact of light colored limestone (left) and gray dolomite (right), with arrow at the trace of a fault plane.
- Plate 4B. Steeply inclined and polished rock surface delineating part of the original sinkhole entrance.
- Plate 4C. Cave formations (speleothems) inside the cave.
- Plate 5A. Travertine substrate (T) covered by a thin silty crust (S) and overlain by clayey deposit (D). Yellowish spots of phosphate (A) alter calcitic crystals of travertine. Plane polarized light. Width of photo 3 mm.

- Plate 5B. Fragments of silty crust (S) and travertine (T) inside the clayey sediment. Plane polarized light. Width of photo 3 mm.
- Plate 5C. Clayey sediment with striated fabric of clay and clay intercalations. Crossed polarized light. Width of photo 1.5 mm.
- Plate 5D. Rounded bone fragments (white areas except voids labeled with V) inside clayey sediment. Plane polarized light. Width of photo 3 mm.
- Plate 5E. Dusty clay coatings (C) around polyconcave voids (V). Note the sand-sized rock fragments inside the clayey matrix. Crossed polarized light. Width of photo 3 mm.
- Plate 5F. Clay and silt intercalations. Crossed polarized light. Width of photo 3 mm.
- Plate 6A. Fragment of dusty clay coating incorporated in the clayey silt matrix. Crossed polarized light. Width of photo 1.5 mm.
- Plate 6B. Massive structure with a few chamber voids (white areas). Width of photo 10 mm.
- Plate 6C. Diffuse silt and clay intercalations and dusty clay coatings (C). Crossed polarized light. Width of photo 3 mm.
- Plate 6D. Burned root (black) inside silty clay sediment. Plane polarized light. Width of photo 3 mm.
- Plate 6E. Mixture of dark and light colored soil aggregates forming large, mammilated, densely packed earthworm excrements. Width of photo 10 mm.
- Plate 7A. The site of the Hagios Charalambos Cave from the road in front of the site, facing southwest.
- Plate 7B. The ledge above the modern road. The cave is at the right, beyond the tents, facing northwest.
- Plate 8A. The remains of the spur that concealed the cave until 1976, facing west. Upper part of Room 2 at lower right.
- Plate 8B. The modern entrance to the cave at lower left, facing north. For scale, see the meter stick at upper right.
- Plate 9A. Grid of long bones placed to form a lattice, creating a platform to support the deposit of human bones and artifacts.
- Plate 9B. Sistrum **98** as found in situ in the Room 4/5 Entrance, level 4.
- Plate 9C. Accumulation of skulls against the northern cave wall of Room 5.
- Plate 10A. Surface of the east side of Room 5 before excavation, showing long bones on the surface and stones that had fallen down from the ceiling.
- Plate 10B. The north–south wall across the center of Room 5, looking northeast and showing the relation of the wall to a large stalagmite that was used to partly brace the stones at the base of the wall.
- Plate 10C. The wall shown in Plate 10B as seen looking east, showing the lower courses that were constructed first, with bones (marked B) across them below the higher courses of stones.
- Plate 11A. Room 5, Area 1, Level 1, showing disarticulated bones near Wall 1.
- Plate 11B. Group of five articulated vertebrae found in Room 5, Area 1, Level 3, area 1.
- Plate 11C. Excavation of Room 5, Area 5, Level 2 showing the disarticulated mass of bones and bone fragments and a small jug (HCH 02-54).

- Plate 12A. The area south of the cave before excavation, facing north. The edge of the deep pit containing the modern entrance to the cave as at the top of the photograph, at the center.
- Plate 12B. Trench 13 after excavation, showing the bedrock near the modern surface.
- Plate 12C. Trench 12 showing the disturbed soil in front of the cave.
- Plate 13. Zoomorphic and anthropomorphic figurines (24–28).
- Plate 14. Anthropomorphic figurines (29–34) and metal objects (35–38, 41).
- Plate 15. Metal objects (54, 55, 65, 66, 76).
- Plate 16. Silver seal disk (77) and ivory stamp seal (81).
- Plate 17. Ivory stamp seals (82, 83).
- Plate 18. Stamp seals (84, 85).
- Plate 19. Stamp seals (86, 87).
- Plate 20. Stamp seals (88, 89).
- Plate 21. Prism seal (90).
- Plate 22. Prism seal (91).
- Plate 23. Prism seal (92).
- Plate 24. Prism seal (93).
- Plate 25A. Cusion seal (94).
- Plate 25B. Sistrum (98).
- Plate 25C. Linear A tablet from Zakros (no. 18a) with a sistrum used as a sign (after Betancourt and Muhly 2006).
- Plate 25D. Detail of the Harvesters Vase from Hagia Triada, showing the sistrum player at the right (after Betancourt and Muhly 2006).
- Plate 26. Miscellaneous objects (204, 205, 208–212, 217, 221, 282, 285, 286, 288, 289). Scale 1:1.

Preface

Costis Davaras first excavated the Hagios Charalambos Cave as a rescue excavation when the site was discovered in 1976 in the Lasithi Plain in the eastern part of Central Crete. The underground rooms were revealed as a result of blasting with dynamite to improve the road that encircles the upland plain. The dynamite created an opening in the ceiling of what would later be called Room 1, so the cave could be entered even though the original mouth was not visible at the time. The situation was extremely dangerous because of the cracked and shattered bedrock, and little work was possible before the front of the cave was removed by power machinery in 1982. Short excavation seasons were conducted in 1982 and 1983, and Davaras then made an important and far-sighted decision that would preserve the cave's information and allow it to make a unique and lasting contribution to the history of Bronze Age Crete. Realizing that he had too few financial and technical resources available to make a proper excavation, he left one room untouched and sealed the front of the cave with a locked iron gate covered by a wall of stone and concrete, to await a future generation with the resources to excavate the site properly.

In spite of these precautions and the proximity of the site to a well-traveled highway, looters broke into the cave in the winter of 2000. They were not apprehended, but they were only able to enter the cave briefly before it was resealed. The danger to the cave was obvious. I was then approached and asked if I could organize a new project. Convincing arguments were made by three different people: my friend and colleague, Costis, the Chief Conservator for the 24th Ephorate, Alekos Nikakis, and the Ephorate's Director, the late Nikos Papadakis, all said the cave was too important to allow it to be destroyed by inaction that would eventually lead to its destruction by clandestine looters.

The science of archaeology had developed enormously between 1983 and the early 21st century, both in the world as a whole and especially in Crete. Computers had

revolutionized the recording and management of information. Electronic total station survey instruments could provide accurate measurements, including of underground chambers. Water separation machines capable of retrieving microscopic evidence were now routine parts of American projects in eastern Crete. The INSTAP Study Center of East Crete in Pacheia Ammos had been built, and it provided technical support in photography, conservation, library study, technical drawing, the storage and study of anthropological material, analysis by laser-induced breakdown spectroscopy (LIBS), ceramic petrography, and other areas. With all this in mind, a team of international scholars was assembled, and we tried to retrieve the maximum amount of knowledge we could within the parameters of the two six-week excavation seasons made possible by the available government permit (in 2002 and 2003, a law that was later repealed limited foreign excavations to six-weeks per year).

Philip P. Betancourt
Philadelphia, 2010

Acknowledgments

Excavations were conducted at Hagios Chalambos in 1976, 1982, and 1983 under the direction of Costis Davaras, in 2002 under the direction of Philip P. Betancourt and Costis Davaras, and in 2003 under the direction of Philip P. Betancourt, Costis Davaras, and Eleni Stravopodi.

The excavations of 1976 to 1983 were supported by the Greek Ministry of Culture. The Temple University Excavations of 2002 and 2003 were supported financially by the Institute for Aegean Prehistory, Temple University, the University of Pennsylvania, and private donors. Thanks are expressed to Steven Tracey, who was then Director of the American School of Classical Studies at Athens, for support and assistance with permits. Special thanks go to Vili Apostolakou, who was then Director of the 24th Ephorate, and to Alekos Nikakis, who was then the Chief Conservator for the Ephorate, for assistance of many types with this project over the course of several years.

Valuable support was given by the staff members of the INSTAP Study Center for East Crete: Thomas M. Brogan, Director; Elizabeth B. Shank, Administrative Coordinator; Eleanor J. Huffman, Assistant to the Director; Stephania N. Chlouveraki, Chief Conservator; Michel Roggenbucke and Kathy Hall, Senior Conservators; Étienne Baxter, Conservator; Erietta Attali (2002) and Chronis Papanikolopoulos (2003), Chief Photographers; Doug Faulmann, Chief Artist; Eleni Nodarou, Ceramic Petrographer; Georgos Serepetsis, Maintenance; and Maria R. Koinakis, Custodian.

The representative from the Palaeoanthropology and Speliology Ephorate in 2002 was Eleni Stravopodi, and Angeliki Kaznesi was the representative in 2003.

In addition to the co-directors and the personnel from the INSTAP Study Center mentioned above, the following persons were members of the Hagios Charalambos team (years of membership are listed after each name): James D. Muhly, field director and metallurgy specialist (2002–2009); Albert Leonard Jr., field director (2002, 2003);

Mary A. Betancourt, registrar (2002–2009); Mary H. Leonard, assistant registrar (2002, 2003); Photeini J.P. McGeorge, physical anthropologist (2002–2009); Alekos Nikakis, conservator and technitis (2002, 2003, 2005); Stephania N. Chlouveraki, conservator (2002–2005); Maria Giannakaki, conservation intern (2002, 2003); Linda Meiberg, assistant to the conservator (2002); Susan Nalezty, computer specialist (2002); Andrew Koh, instrument survey team supervisor (2002); Tamryn L. McDermott, instrument survey team member (2002); Gayla M. Weng, trench supervisor, assistant to the photographer, residue sorting, and assistant pottery specialist (2002–2005); Antonia Stamos, trench supervisor (2002); Susan C. Ferrence, trench supervisor and pottery specialist (2002–2009); Louise C. Langford-Verstegen, trench supervisor, instrument survey team member, and pottery specialist (2002–2009); Maria Tsiboukaki, assistant trench supervisor (2002, 2003); Alison Cox, palaeobotanist (2002); Panagiotis Karkanas, geologist (2002, 2003); Jane Hickman, assistant to the physical anthropologist (2003–2006); Michael Furlong, assistant to the physical anthropologist (2003, 2004); Alexis Boutin, assistant to the physical anthropologist (2003); Étienne Baxter, assistant to the physical anthropologist and conservator (2003–2006); Tanya J. McCullough, trench supervisor, residue sorting, and pottery assistant (2003, 2004); David S. Reese, faunal remains specialist (2004, 2006–2009); Heidi M.C. Dierckx, stone tools specialist (2004, 2005); Michael Ionakis, conservator (2005); Judith Papit, assistant pottery specialist (2005).

Thanks are expressed to many other individuals for help with this project. The authors are grateful to Walter Müller and Ingo Pini and the Corpus of Minoan and Mycenaean Seals, in Marburg, founded by Frederich Matz, for photographs and drawings of the seals excavated between 1976 and 1983.

All the members of the team would like to thank: Costas and Galatia Manussakis, our hosts at the Hotel Dionysos in Magoulas; Manolis Yerkakis, our host at the Hotel Zeus in Psychro; and all of our many friends in Lasithi for their wonderful hospitality during the years of excavation; and Yannis, Aristidis, and Maria Chalkiadakis, our hosts at the Hotel Tholos Beach in Kavousi, for their hospitality during the study seasons.
